## Table of Contents

### > Introduction

Overview

Benefits of the New SAP Digital Access License Model

Conversion Options for Existing Licenses

### ✓ Measurability

Measurement with the SAP Passport

Estimation Reports

Technical Prerequisites for Measurability

Identification of Different Access Types

### > Documents and Actions Relevant for the SAP Digital Access License

Reporting Tools

License Audit Practice

## ✓ Use Case Scenarios

### ✓ Digital Access Documents Are Counted

Access Through a Non-SAP Application

Time Recording Through a Non-SAP Application

Access Through a Non-SAP Application and a Cache Data Store

Data is Pulled from a Non-SAP Application Through Non-SAP Functionality

Unattended Access Through Non-SAP Robotic Process Automation

### ✓ No Digital Access Documents Are Counted

> Direct Human Access

> SAP Application Access

Updates and Documents Not

### ✓ Counted as Digital Access Documents

Non-SAP Application Reads and Updates Digital Access Documents

Time Events Through a Non-SAP Application

# SAP Help Portal. Digital Access

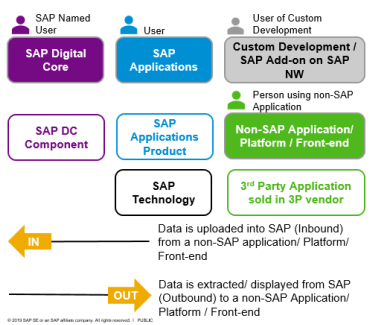

## New Use Case scenarios for RPA

1. [Attended Access Through SAP Intelligent Robotic Process Automation](#)
2. [Unattended Access Through SAP Intelligent Robotic Process Automation](#)
3. [Attended Access Through Non-SAP Robotic Process Automation](#)
4. [Unattended Access Through Non-SAP Robotic Process Automation](#)

The screenshot shows a document titled "Unattended Access Through Non-SAP Robotic Process Automation". It includes a table of contents on the left and a main content area with a diagram. The diagram illustrates a flow from "Non-SAP Robotic Process Automation (Unattended bot)" to "Business Data" and then to "Digital Core (SAP Applications)". A note states: "In this scenario, the non-SAP bot is unattended, meaning that no individual user needs to be logged into the digital core during the creation of these documents. As no individual user is required and the bot is non-SAP, the documents created in this way are counted as digital access documents." Below the diagram, it lists use cases: "Unattended Access Through SAP Intelligent Robotic Process Automation" and "Attended Access Through SAP Intelligent Robotic Process Automation".

## DA Advanced Scenarios

### Key Guide for Indirect Access Scenarios

**Scenario Validation:**  
Validation of License needs related to the scenario.

Proces	Name of the Process
IN / OUT	Direction of Data update: Inbound or Outbound
Required	SAP Products that are required to license related to IU scenario.
Access	Access Method how the Use occurs: Direct Human, SAP Applications or Indirect/Digital Access.
IU by Users	Applying the IU licensing model by User, do we need to license Named Users?
IU by DA Documents	Applying SAP Digital Access for ERP licensing model, do we need to license DA Documents?

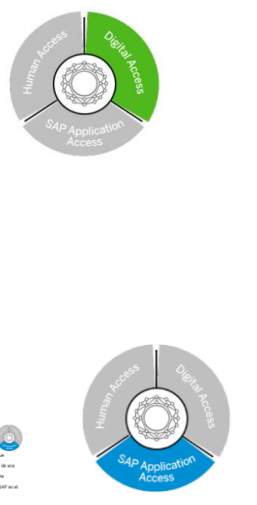

YES option will only apply if the Use results in creating one of 9 DA Document types.

The four diagrams show:
 

- Revisión de Escenarios de Integración con SAP Acceso a través de una Interfaz de Usuario (Client App):** Data flows from SAP Digital Core through a Client App to SAP FI/CO.
- Revisión de Escenarios de Integración con SAP Actualización de Datos en SAP Digital Core a través de un Job Batch:** A Batch Job updates data in SAP Digital Core.
- Revisión de Escenarios de Integración con SAP Datos cargados a SAP desde una Aplicación de Terceros:** Data is loaded from a 3rd party application into SAP Digital Core via an extension.
- Revisión de Escenarios de Integración con SAP Acceso a través de una Extensión ABAP actualizando Datos en SAP:** An ABAP extension updates data in SAP Digital Core.

The three diagrams show:
 

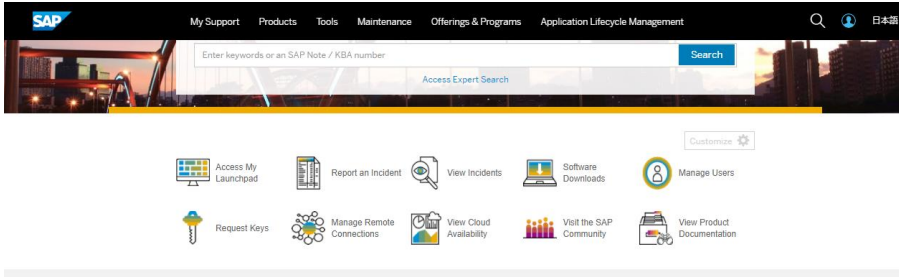

- Revisión de Escenarios de Integración con SAP Data cargados en SAP desde una Aplicación de Terceros mediante funcionalidad no-SAP:** Data from a 3rd party application is loaded into SAP via a non-SAP interface.
- Revisión de Escenarios de Integración con SAP Acceso a través de una Extensión desarrollada sobre SAP Cloud Platform:** A non-SAP application uses a SAP Cloud Platform extension to access SAP Digital Core.
- Access SAP DC Through a Non-SAP Application:** A non-SAP application accesses SAP Digital Core through a specific extension.
